

Sub Location (Canadian Shipments)

This article is part of the [Customs Compliance Guide](#).

In Bond shipments may move to a bonded warehouse or continue on for export.

A **Sublocation code** is a code for a CBSA approved warehouse facility where a specific cargo report will be acquitted and the goods will be authorized to deliver. ^[1] The sublocation code is mandatory for **In Bond** shipments into Canada, as it tells CBSA exactly where the goods will be bonded to while they await release.

In ACI eManifest, the sublocation is required to be transmitted for all in bond shipments. It is also advised to be transmitted for PARS that may fail and move in bond, so that an amendment is not required at the border to allow the in bond move. Carriers using BorderConnect's ACI software can find a sublocation code by typing either the name of the warehouse or the code itself. CBSA also maintains a list of approved sufferance warehouses [here](#).
